

Postoje  $S_8$  na prosbi gredi. Uga računam kao reakciju od  
pa samo  $X_8$  pomnožim sa  $B$ ,  $X_7 = A$ ,  $X_9 = D$

$M_{S_1} \quad 0 \leq X_1 \leq 5.2$

$$F_1^+ = \frac{1}{2} \frac{X_1 \cdot X_1'}{7.8} \cdot 7.8 + \frac{1}{2} \cdot \frac{1}{3} X_1' \cdot 2.6 = \frac{1}{2} X_1 \left( X_1' + \frac{1}{3} \cdot 2.6 \right) = \frac{X_1}{6} (3X_1' + 2.6)$$

$$= \frac{X_1}{6} (3(7.8 - X_1) + 2.6) = \frac{X_1}{6} (26 - 3X_1)$$

$$= \frac{1}{6} (26X_1 - 3X_1^2) \quad \text{--- PARABOLA}$$

A ZASTO POSLE  
JE SAMO NA DUE  
5.2

$$(F_1^+)' \rightarrow \max$$

$$(F_1^+) = 0 \quad 26 - 3X_1 = 0 \quad X_1 = \frac{26}{3} = 4.3^\circ$$

$$\max F^+ = \frac{1}{6} (26 \cdot 4.3^\circ - 3 \cdot 4.3^\circ^2) = 9.38^\circ$$

$$F_1^- = \frac{1}{2} \cdot \frac{1}{3} X_1' \cdot 10.4 = \frac{5.2}{3} X_1'$$

$M_{S_2} \quad 0 \leq X_2' \leq 5.2$

ČIM IMAM  $X_2^2$  parabola

$$F_2^+ = \frac{1}{3} X_2' \cdot \frac{1}{2} \cdot 7.8 = 1.3 X_2'$$

$$F_2^- = \frac{1}{2} X_2' (X_2' + 7.8) \quad \text{--- parabola}$$

- zato što se preseku  $S_2$  pomeru  
pa se uveća i dužina na kojoj  
deluje

$M_{S_3} \quad 0 \leq X_3 \leq 7.8$

$$F_3^+ = \frac{1}{2} \frac{X_3 \cdot X_3'}{7.8} \cdot 7.8 = \frac{1}{2} X_3 \cdot (7.8 - X_3)$$

$$F_3^- = \frac{1}{2} \cdot \frac{1}{3} X_3 \cdot 7.8 = 1.3 X_3$$
